IT 592 Graduation Project

Course Objective

Project Course All graduate students pursuing a non-thesis MSc. Program are required to complete a project. The project topic and contents are based on the interest and background of the student and are approved by the faculty member serving as the Project Supervisor. At the completion of the project,the student is required to submit a final report and present the project. This course aims to provide the students with skills and training to conduct research in a certain area, manage a project on time and to interpret the outcome of the research study. In addition, students are expected to gain experience and further skills in creating a proper project proposal, identifying and evaluating the principal components that will establish the project scope, conducting a literature survey and compiling the results, deciding on the formal methodology and analyzing the outcome, gaining experience in teamwork, cooperation and information sharing, publishing a project report in a format accepted by the scientific communities, and finally preparing and executing a presentation of the project outcome.

Tasks

- Detailed Project Proposal (At the beginning of the term)
- Progress Report-1: First phase of progress presentation
- Final Report Submission: Final detailed summary of the project completed.
- Project Presentation & Demo

Templates for all of the documents will be provided.

Grading

This is a pass/fail course. However, to be eligible to pass, a minimum of 70 points must be achieved from the tasks listed below and all tasks must be submitted. If any of the task submissions is not completed, students will not be eligible to pass.
